Intraoperative Computed Tomographic (CT) Scanning

Robert Stanley, MD (page 19), of the University of Washington at Harborview in Seattle, presents a new technique to perform intraoperative CT scanning that will improve results and reduce secondary operations. This will be discussed by Dr Paul Manson (page 25), Chief of Plastic Surgery at Johns Hopkins University.

The Importance of Nasal Subunits in Reconstructive Surgery

Kevin Shumrick, MD, and associates (page 9) present a scientific analysis of nasal subunits after nasal reconstruction and make new recommendations to improve results. These new recommendations, which challenge the current practice, are critically discussed by Dr Gary Burget (page 16), a plastic surgeon from Chicago and world authority on this procedure.

Techniques for Avoiding Blepharoplasty Complications

Shan Baker, MD (page 33), presents his technique to preserve fat and prevent blepharoplasty complications. This new technique is discussed by oculoplastic surgeon Dr Norman Shorr and colleagues (page 38).

Cleft Lip Rhinoplasty

Tom Wang and Simon Madorsky (page 40) describe a new technique for the cleft lip rhinoplasty.
